BRIEF DESCRIPTION OF THE INVENTION

Fig. 1 illustrates a screen of the invention.

Please enter on page 5, immediately after "DETAILED DESCRIPTION OF THE INVENTION" the following:

Fig. 1 illustrates a screen of the invention comprising a radiation-transparent substrate, 1, a stimuable layer formed on the substrate, 2, a first transparent organic film covering the stimuable phosphor layer and a second transparent film formed on the first transparent organic film.

Please amend the Abstract in accordance with the following instructions:

A stimuable phosphor adapted to convert incident radiation into visible light is formed on one surface of a substrate in a storage phosphor panel, wherein surfaces of phosphor and, optionally, the ~~said~~ substrate, are covered with a poly-paraxylylene film, whereas a film-forming silazane or siloxazane type polymeric compound covers the outermost surface of the poly-paraxylylene film on the phosphor side.
